PROFESSIONAL SUMMARY

Senior Full Stack Software Engineer with 6+ years of experience designing and building production web applications, SaaS platforms, and distributed backend services across E-commerce, Fintech, and GovTech. Experienced across TypeScript, React.js, Next.js, Node.js, NestJS, PostgreSQL, Redis, Kafka, and AWS, combining technical ownership, architecture decision documentation, peer code reviews, and technical mentoring with hands-on delivery. Built bulk catalog pipelines processing 100K+ products (80% reduction in manual operations), real-time WebSocket trading interfaces with TOTP MFA and KYC/AML workflows, and public GraphQL APIs sustaining 99.9% uptime with a 40% reduction in third-party integration time.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), Python, SQL, Bash

Frontend: React.js, Next.js, React Native, Vite, Redux, TanStack Query, Tailwind CSS, SSR / SSG / ISR, Accessibility (WCAG)

Backend: Node.js, NestJS, Express.js, REST APIs, GraphQL, Apollo GraphQL, gRPC, WebSockets, Microservices, BullMQ, Kafka

Databases: PostgreSQL, MongoDB, Redis, Prisma, Drizzle ORM

AI & Media: MCP, Gemini, Claude Code, Deepgram, ElevenLabs, LiveKit, WebRTC, FFmpeg

Infrastructure: AWS (Lambda, S3, EC2, DynamoDB), Docker, CI/CD, Datadog, Linux, Nginx, Git, System Design, Clean Architecture, Distributed Systems, Agile / Scrum

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer | TechnoNext Software Limited — Dhaka, Bangladesh | Jun 2025 – Present

- Architected a bulk product ingestion pipeline using Node.js, NestJS, BullMQ workers, and AWS S3 with multi-stage validation workflows, automating catalog onboarding for **100K+ products** and achieving an **80% reduction** in manual operations.
- Engineered event-driven microservices with Apache Kafka and TypeScript, authoring architecture decision records (ADRs) to formalize service boundaries, asynchronous messaging contracts, and fault-tolerant execution.
- Implemented internal gRPC services backed by NestJS and PostgreSQL for structured inter-service communication across real-time inventory management, seller validation, voucher processing, and logistics integrations.
- Delivered an end-to-end order lifecycle system integrating third-party logistics APIs, SLA tracking, automated notifications, and live operational monitoring to keep multi-vendor fulfillment reliable.
- Diagnosed and resolved BullMQ and Redis queue bottlenecks, retry failures, and timeout instability under peak catalog workloads, stabilizing background job execution and system throughput.
- Built full-stack seller and administration dashboards with React.js, TypeScript, and NestJS to streamline complex catalog management and operational order workflows.
- Conducted peer code reviews, provided technical mentoring to engineers, and contributed to shared engineering standards and codebase maintainability across backend and full-stack modules.

Senior Frontend Developer | NEXT Ventures — Dhaka, Bangladesh | Aug 2023 – May 2025

- Architected core frontend modules and reusable React component patterns in Next.js and TypeScript for a fintech trading platform handling live market data, transactional workflows, and compliance-sensitive operations.
- Engineered WebSocket-driven real-time market and portfolio dashboards for high-frequency activity, applying React memoization and structured state isolation to prevent unnecessary re-renders.
- Designed scalable client state management and authorization workflows synchronizing authentication, trader onboarding, trading execution, and real-time portfolio balances.
- Implemented TOTP-based multi-factor authentication (MFA), device fingerprinting, and KYC/AML onboarding using Sumsub OCR verification to strengthen account security and streamline identity checks.

- Delivered multilingual internationalization across **5+ languages** using Next.js and i18next, standardizing modular dashboard layouts and reusable UI structures.
- Conducted code reviews, mentored engineers, and documented frontend architectural decisions and component standards to improve code quality and maintainability.
- Collaborated with backend, product, and QA teams to ship responsive financial workflows end-to-end, including server-side PDF certificate generation and operational dashboard features.

Backend Developer (Node.js) | Dorik AI Sylhet, Bangladesh | Jun 2022 – Jul 2023

- Designed and maintained a public-facing Node.js and GraphQL API platform powering integrations with Zapier, Notion, and Google Docs across thousands of daily developer requests.
- Reduced third-party partner integration time by **40%** through cleaner GraphQL schema design, consistent error contracts, and structured developer documentation.
- Implemented OAuth2 authentication, token-based rate limiting, and fault-tolerant error handling to safeguard API reliability under high-concurrency traffic.
- Integrated Airtable as a headless CMS backend, achieving a **20% reduction** in internal content operations workload.
- Instrumented Datadog observability across metrics, traces, and alerting for production services, sustaining **99.9% API uptime**.

Frontend Developer | Penta Global Limited Dhaka, Bangladesh | Apr 2019 – May 2022

- Engineered core frontend architecture and reusable React.js modules for a government-backed digital investment platform, contributing to a **23% increase** in regional investment registrations.
- Developed a QR-code digital certificate issuance and verification system integrated with backend REST APIs, achieving a **30% reduction** in manual certificate processing time.
- Migrated **30+ legacy Laravel views** to modular React.js components while preserving data integrity and REST API compatibility.
- Partnered with backend and QA teams to deliver responsive, cross-browser compatible production features with improved usability across public-sector workflows.

KEY PROJECTS

HookVault — Event-Driven Webhook Delivery Platform [In Development]

Commercial multi-tenant webhook infrastructure engineered with NestJS, gRPC, Kafka, BullMQ, PostgreSQL, Drizzle ORM, and Redis. Designed for reliable event ingestion, **HMAC-SHA256** signing, idempotency keys, exponential backoff retries, per-endpoint circuit breakers, dead-letter queues, GraphQL inspection APIs, and a Next.js / TanStack Query replay console.

FlowForge — Distributed Order Saga & Ledger Platform [In Development]

Commercial order orchestration and financial state-machine engine built with NestJS, Kafka, gRPC, BullMQ, PostgreSQL, Redis, and Next.js. Implements compensating **Saga workflows**, **double-entry payment ledgers**, transactional outbox tables, Redis distributed reservation locks, cross-service correlation tracing, and deterministic dead-letter event replay.

RelayFlow — Multi-Tenant AI Voice & Workflow Automation Platform [In Development]

Commercial B2B conversational AI SaaS built over WebRTC and LiveKit combining Deepgram speech-to-text, Gemini tool calling, ElevenLabs synthesis, and **MCP** adapters. Pairs organization-scoped **RBAC**, PostgreSQL / Prisma tenant isolation, and encrypted AWS S3 call storage with BullMQ and FFmpeg post-call workflow pipelines.

EDUCATION

Bachelor of Science (BSc) Coursework (Incomplete) | National University Bangladesh Dhaka, Bangladesh | Attended 2015 – 2020
